DIRECTIONS FOR USE Undo cap and pierce the end seal. Clear up other readily available foodstuffs. Place 3-4 drops (0.3-0.4g) of product per bait point, preferably in the late evening, into a refillable bait station or on an impervious surface (eg plastic, glass or metal) by the ant run. Change the bait daily until ant activity ceases (usually 7 to 10 days). Replenish as necessary. Do not disturb feeding ants, which pass Nippon onto the entire colony. Ants are only controlled if Nippon is the main food source.

When used outdoors use a maximum of 3 refillable bait points OR gel bait at a maximum of 3 bait points (but do not use both patterns at the same time). Effective for up to 1 month.

Wash hands and exposed skin before meals and after use. Prevent access to bait by children and animals.

Keep in a safe place. Hazardous to bees. Do not use where food, feed or water could become contaminated. There should be an interval of at least 7 days between 28-day treatment campaigns.

Remove all remains of bait and bait containers. Do not contaminate surface water or drains with chemicals or used container. Do not re-use container. Store in original container. Shelf life up to 2 years.

To avoid risks to human health and the environment, comply with the instructions for use.

FIRST AID

Skin contact : No harmful effects anticipated from dermal exposure. Wash with soap and water.

Eye contact : Possible irritation. Rinse with water thoroughly. If irritation persists seek medical advice.

Ingestion : Low toxicity. Wash out mouth with soap and water and seek medical advice.
