

Innovation for Construction

Ratwall

Effective Rodent Exclusion Unit

- Unique compression installation - body diameter can be reduced for 'low force fit' and then simply expanded again to securely 'friction fit' into place
- Corrosion and acid resistant full Stainless Steel, robust construction
- External hinge prevents debris snagging internally, whilst curved pipe flap opens fully against top of pipe ensuring maximum possible flow
- Available in 100 & 150mm sizes to suit both clay and PVC pipework
- Rodents are unable to pass through the device against the direction of drainage flow and can't enter the property
- Can be inserted easily into deep chambers with the aid of the optional installation pole that compresses diameter of the body from ground level
- Solid external 'pipe stop' mount ensuring Ratwall cannot fall into drainage line. Device does not need additional anchor cable or silicone
- Ratwall is configured to work within a chamber outlet but can be re configured on site to work within a chamber inlet
