## NON-TOX INDICATOR PASTE

UFI: 6Y1W-H0TW-Y00C-PUFU

NON TOXIC INDICATOR PASTE FOR PROFESSIONAL USE AGAINST RATS AND MICE.  
FOR USE IN INDOOR AND OUTDOOR SITUATIONS

300g e

### DIRECTIONS FOR USE:

Apply 3-4g of Non-Tox Indicator Paste from a caulking gun to tamper resistant bait boxes. Place boxes in areas where mice or rats are likely to run and to intercept an entry, but not near hot pipes, ovens etc. Inspect regularly for the presence of tooth marks and other signs of rodent activity. If an infestation is suspected, replace Non-Tox Indicator Paste with a suitable alternative rodenticide.

**Notes:** Non-Tox Indicator Paste is to be used in premises where the use of preventative rodent baits is undesirable and the presence of mice or rats is not suspected. Non-Tox Indicator Paste should be used between 16°C and 25°C (between 60°F and 77°F) for optimum use - outside these temperatures the product may be too hard or too soft. Keep out of the reach of children.

Safety data sheet available on request.
