# Defenda Non-toxic Wax Monitoring Blocks

#### DIRECTIONS FOR USE

Place Defenda monitoring blocks where there are signs of rodent activity, both inside and outside buildings.

Place Defenda monitoring blocks throughout the infested area. Only place one or two blocks securely at each monitoring point.

Place more monitoring points than you would place toxic baiting points to obtain a good activity profile of the rodents.

Protect Defenda monitoring blocks from non-target animals and from water, preferably using commercially available bait stations.

Fix the blocks in place using wire or a nail inside pieces of drainage pipe, under sections of slate, board or corrugated iron, securely weighted, just as you would for a toxic bait block.

Make frequent inspections of the bait points.

Careful examination of chewed blocks can reveal whether they have been eaten by rats, mice or even insects.
